The Illuminator Glider

by

• ONE DOOR DOES IT ALL

The Illuminator Glider Door from Ultimate Products eliminates wind doors, air doors, vinyl curtains, plastic sliders, roll-ups, and separate doors for round-the clock operation and security.

• LOWER OPERATING COSTS

Panels are constructed of tough, shatterproof Lexan® polycarbonate in a frame of heavy duty, reinforced aluminum. During the day panels transmit sunlight for customer comfort and heat. At night, normal interior lighting emits a bright glow to the outside, while the door provides insulation.

• TOUGH AND SHATTERPROOF

Illuminator Polycarbonate Doors from Ultimate Products employ the same material used for vandal-proofing stained glass windows and bulletproof screens. When struck, panels flex, without breaking or shattering. Teamed with Ultimate Product's Air Powered Door Operator, the Illuminator doors operate quickly between washes for complete weather protection and noise containment.

• SPACE ADVANTAGES

- Typical overhead track protrudes 10' into building. The Glider Door only takes up 5 1/2" inside of building
- Low Clearance – Only 8 1/2" needed above door opening

• ADVANCED ENGINEERING BENEFITS

*The Illuminator Glider Door

Requires:
